Build a python code. Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect an alarm in case of high temperature.

program:

```
import random
temp = random.randint(0, 100)
humid = random.randint(0, 100)
print("Note: ")
print("Normal Temperature Level is 50°C")
print("Normal Humidity Level is 50%")
print(" ")
if (temp >= 50):
    print("Temperature is High", temp, "°C")
else:
    print("Temperature is Normal", temp, "°C")
if (humid >= 50):
    print("Humidity is High", humid, "%")
else:
```

RESULT:

The screenshot shows the OnlineGDB website interface. The top bar includes navigation links like 'Run', 'Debug', 'Stop', 'Share', 'Save', and 'Beauty'. The sidebar on the left contains links for 'My Projects', 'Classroom', 'Learn Programming', 'Programming Questions', 'Sign Up', and 'Login'. The main area displays a Python program in a text editor, which has been executed. The output is shown in a terminal window, displaying the following text:
